LogStare, a SecuAvail Subsidiary, Announces Launch of Ready-to-Use Integrated Log Management Appliance

LogStare Inc. (hereinafter “LogStare”), a group company of SecuAvail Inc. (Headquarters: Kita-ku, Osaka; President & CEO: Masaomi Yoneima; TSE Growth: 3042; hereinafter “SecuAvail”), a company specializing in IT security, has launched the “LSC Appliance,” an integrated log management appliance that enables users to start log management easily—simply by installing the device.

The appliance is shipped with “*LogStare Collector*,” LogStare’s proprietary integrated log management software, pre-installed on a microserver. This significantly reduces the burden on users by eliminating the need to procure server hardware or install operating systems and software. It can be easily utilized as a security management solution in small and medium-sized offices that do not have dedicated IT operations personnel.

Logs can be searched using keywords or regular expressions

With the widespread use of the Internet for business, organizations of all sizes and industries are exposed to a variety of security risks, including supply chain attacks, internal fraud leading to data leaks, and ransomware infections. To implement effective security measures, it is essential to monitor and analyze access logs and system

activity to understand the current situation and formulate appropriate security policies.

In the event of a security incident, it is also crucial to monitor and analyze access logs and system activity to identify the scope of damage, accelerate initial response, and prevent recurrence.

However, in many organizations, the management of network devices, security appliances, and servers is outsourced to IT vendors. As a result, the collection and retention of logs for each system are often not managed in an integrated manner.

Even when organizations attempt to implement integrated log management, various obstacles arise due to the involvement of different IT vendors and internal personnel. When deploying log management software, coordination is often required among those responsible for procuring servers and installing operating systems, the IT vendors managing the equipment, and internal infrastructure staff. These complexities create significant barriers to implementation.

The LSC Appliance, launched by LogStare, is a ready-to-use, plug-and-play integrated log management appliance designed for organizations facing these challenges. It can collect and store up to 100 GB of logs, and for organizations needing additional storage, a cloud-based log retention service is available as an optional add-on. Furthermore, leveraging LogStare's unique strengths as a manufacturer, optional services such as log collection configuration support and log analysis advisory are also offered.

■Included / Optional Services

- Help desk support for log collection and management
- Initial setup for integrated log management, including log collection and management (optional)
- Configuration of log output settings on devices for log collection (optional)
- Long-term log storage in the cloud (optional)
- Provision of a log investigation and analysis portal (optional)
- Log investigation, analysis, and advisory services (optional)

■Main Systems for Log Collection

- Next-generation firewalls
- Network switches
- Windows servers
- Linux servers
- Cloud services (e.g., AWS, Azure)

■Types of Collectible Logs

- Syslog
- Windows Event Logs (collected via WMI)
- Metrics Logs (collected via REST API)
- Amazon CloudWatch Logs
- Other text-based logs

The LSC Appliance will be offered at JPY 366,500 in its first year. In addition to direct sales to end users, LogStare will also begin recruiting sales partners.

Going forward, LogStare will continue to develop products and features that meet user needs, providing essential security operations products and services for corporate IT operations. Through these efforts, the company aims to contribute to raising the level of cybersecurity in Japan and addressing broader societal challenges.

About SecuAvail Inc.
Founded in 2001, SecuAvail Inc. is one of the few Japan-based companies exclusively dedicated to network security, offering long-term operational support for corporate and organizational information systems. To ensure robust system security and uninterrupted business continuity, the company provides services that are both highly secure and practically applicable.
For over two decades, SecuAvail has offered *NetStare*, an integrated security operations service that uniquely combines the capabilities of both a Security Operation Center (SOC) and a Network Operation Center (NOC). Through *NetStare*, the company monitors more than 11,000 client network devices in real time, collecting approximately 2.5 billion log entries per day. This enables rapid detection of equipment failures, communication outages, and cyberattacks—24 hours a day, 365 days a year.

About LogStare Inc.
Founded in August 2020 with investment from SecuAvail Inc., LogStare Inc. develops and markets the *LogStare* series, a fully domestic managed security platform that delivers high-precision log management and monitoring powered by AI. The company's solutions are widely used across diverse IT environments, including Security Operation Center (SOC) providers, data center operators, public institutions, private enterprises, and individual users, with a cumulative user base exceeding 5,600.

About the LogStare Series
The next-generation managed security platform *LogStare* is a SaaS-based log analysis and security operations platform independently developed by LogStare Inc. under the supervision of its parent company, SecuAvail Inc., which has provided SOC services since its founding in 2001. Designed as a fully domestic solution, LogStare Inc. supports all types of IT products, from cloud to on-premises environments, by centrally managing logs and monitoring data generated within enterprises. It enables comprehensive system support through daily network monitoring, root-cause analysis in the event of incidents, and AI-driven predictive insights, thereby helping organizations operate their IT systems more securely and efficiently.
