InfiniVAN to Support the Smart City Development of Cebu, a Key Metropolitan Area in Central Philippines, with High-Speed and Stable Internet Connectivity.

InfiniVAN, Inc. ("InfiniVAN"), a subsidiary of our company engaged in the telecommunications business in the Philippines, has officially received the Notice to Proceed for the Smart City Development Project in Cebu, a key metropolitan area in the Visayas region of Central Philippines, on January 27.
Cebu City aims to become an environmentally sustainable Smart City, and InfiniVAN will strongly support this initiative by providing high-speed and stable telecommunications infrastructure.

Through the development of a fiber loop infrastructure connecting barangays, InfiniVAN is set to enhance digital access, drive economic growth, and improve public services for Cebuanos.

Cebu City Hall

This initiative aligns with Cebu's vision of becoming a fully connected and future-ready metropolis, ensuring that residents, businesses, and local government units can benefit from seamless online communication, efficient e-governance services, and advanced cybersecurity measures. By leveraging Japan-grade fiber technology, InfiniVAN is transforming Cebu's digital landscape into a model for Smart City development.

InfiniVAN recognizes the regional disparities in telecommunications infrastructure as a social issue and is committed to addressing this challenge. In 2023, the completion of the Philippine Domestic Submarine Cable Network (PDSCN) marked a significant milestone, and in 2024, we established our fourth office in Cebu City. We will continue to expand our services across the Philippines, including the Visayas region, to further enhance connectivity nationwide.
