GRCS Integrates SecurityScorecard into Supplier Risk MT to Strengthen Third-Party Cyber Risk Management

Real-time, AI-powered cybersecurity ratings now available in SRMT, enabling Japanese organizations to monitor contractor and supply chain risk with greater precision

TOKYO — March 31, 2025 — GRCS Inc. today announced the integration of SecurityScorecard's cybersecurity risk ratings into *Supplier Risk MT* (SRMT), the company's cloud-based platform for managing external contractor risk. The integration enables Japanese organizations to continuously assess, monitor, and respond to cyber risk across contractors and supply chain partners with greater accuracy and operational efficiency.

As cyberattacks grow more sophisticated, the need for robust corporate cyber risk management has intensified. Organizations must go beyond internal defenses to assess and continuously monitor the security posture of external contractors and suppliers. Rapid, accurate, and comprehensive risk management has become essential to maintaining business continuity and regulatory compliance.

To address this need, GRCS—provider of a wide range of risk management solutions—has integrated SRMT with SecurityScorecard, a platform recognized for its proven track record in AI-powered, comprehensive cyber risk rating. Through this integration, SRMT users can now access real-time security scores and risk data from SecurityScorecard, enabling clear visibility into the cybersecurity status of third parties, including external contractors.

By leveraging SRMT's features, organizations can conduct third-party risk assessments, centralize outsourcing information, and track risk trends over time. Users are also able to receive automated notifications of score fluctuations, allowing timely response to emerging risks.

Key Capabilities:

- Capture SecurityScorecard scores within SRMT and centralize their management.
- Receive score fluctuation alerts and maintain traceability records, including dates and reasons.
- Analyze and visualize accumulated scores alongside contractor information and outsourced work details.

Partner Quotes:

“We sincerely welcome the launch of this functional integration between SecurityScorecard and SRMT,” said [a spokesperson from GRCS.] “As cyber risks continue to increase across enterprise operations, it has become more difficult to access timely and actionable information. We are confident that this collaboration—leveraging the achievements and insights of both companies—will contribute to enhancing vulnerability management and reducing security risk for businesses in Japan.”

About GRCS:

Company name: GRCS Inc.

CEO: President & Representative Director, Yoshikazu Sasaki

Address: Palace Building 5F, 1-1-1 Marunouchi, Chiyoda-ku, Tokyo

Founded: March 2005

Paid-in capital: 50 million yen

Listed Market: Tokyo Stock Exchange Growth (Securities code: 9250)

Main business: GRC/Security Solutions

About SecurityScorecard:

SecurityScorecard created Supply Chain Detection and Response (SCDR), transforming how organizations defend against the fastest-growing threat vector—supply chain attacks. Our industry-leading security ratings serve as the foundation and core strength, while SCDR continuously monitors third-party risks using our factor-based ratings, automated assessments, and proprietary threat intelligence, to resolve threats before they become breaches. MAX enables response and remediation capability, working through our service partners to protect the entire supply chain ecosystem while strengthening operational resilience, enhancing third-party risk management, and mitigating concentrated risk.

Trusted by over 3,000 organizations—including two-thirds of the Fortune 100—and recognized as a trusted resource by the U.S. Cybersecurity & Infrastructure Security Agency (CISA). Backed by Evolution Equity Partners, Silver Lake Partners, Sequoia Capital, GV, NGP, Intel Capital and Riverwood Capital, SecurityScorecard delivers end-to-end supply chain cybersecurity that safeguards business continuity.
