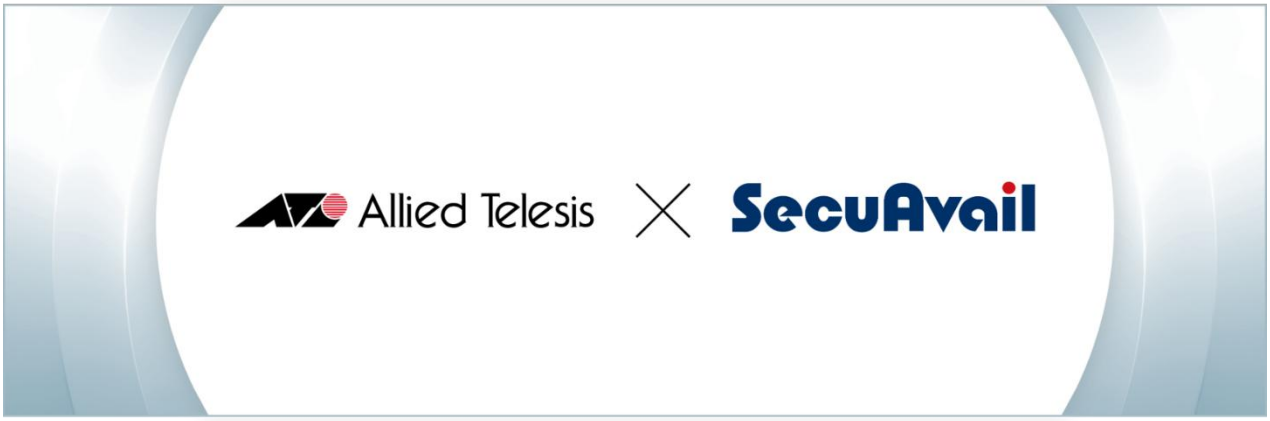
Allied Telesis and SecuAvail Enter into a Basic Agreement for Strategic Collaboration – Combining Network Technology and Log Analysis/SOC Expertise to Advance Next-Generation Security Operations –

Allied Telesis, Inc. (Tokyo, Japan; President and Representative Director: Sachie Oshima) and SecuAvail Inc. (Osaka, Japan; President and Representative Director: Masaomi Yoneima) are pleased to announce that they have entered into a basic agreement to establish a new collaborative framework by leveraging the strengths of their respective products and services.

As part of this agreement, SecuAvail has joined Allied Telesis' Technology Alliance Partner Program (TAP).



This basic agreement aims to bring together Allied Telesis' network devices and network visualization and control technologies with SecuAvail's expertise in log collection, storage, and analysis platforms, as well as its operational know-how in Security Operations Centers (SOC).

Through this collaboration, the companies aim to establish a next-generation security operations model that correlates logs collected from diverse systems and devices with network status information, enabling comprehensive support from the identification of security risks to incident response.

The two companies will collaborate to develop next-generation security operations products and services for enterprises, local governments, educational institutions, and healthcare providers, leveraging AI to autonomously detect, analyze, and respond to cyber threats.

In addition, the two companies will jointly advance the planning, design, development, and deployment of solutions that link network infrastructure with SOC services. Furthermore, with a view to supporting organizations' compliance with the Security Countermeasure Assessment Program for Supply Chain Reinforcement (SCS Assessment Program), designed to enhance

cybersecurity standards across the supply chain, the companies will also discuss packaging these solutions.

Allied Telesis is a Japan-based network-focused manufacturer that provides network equipment, along with products and services that support network visibility and management. The company supports customers from the construction of network infrastructure through its operation and management, helping to underpin the IT infrastructure of a diverse range of organizations.

SecuAvail specializes in network security, with core strengths in log collection, storage, and analysis platforms, as well as Security Operations Center (SOC) operations. Through the analysis of logs generated by diverse systems and devices, the company helps organizations identify security risks and respond to incidents. Furthermore, the SecuAvail Group provides "LogStare," a managed security platform developed and marketed by its group company, LogStare Inc. The platform offers network monitoring, log management, AI-driven predictive analytics, and other advanced security functions.

As part of this collaboration, SecuAvail has joined Allied Telesis' Technology Alliance Partner Program (TAP). Through this partnership, the two companies will advance the development of a framework that connects AI agents with the network control capabilities provided by Allied Telesis via the Model Context Protocol (MCP). This framework is intended to enable AI to support not only the identification of security risks through log analysis, but also the execution of appropriate countermeasures on the network side in response to those risks.

Going forward, Allied Telesis and SecuAvail will continue to leverage their respective technologies and expertise to develop solutions that closely link network infrastructure and security operations. Through these initiatives, the two companies will help organizations enhance the sophistication and effectiveness of their security operations.

■ Comments from Both Companies

【Mr. Yutaka Nakajima, Senior Executive Officer, Allied Telesis, Inc.】

As the threat of cyberattacks continues to grow, effective security measures must extend beyond responding to individual devices and systems. There is a growing need for a broader perspective that enables organizations to understand the state of the entire network and accurately detect signs of potential threats.

This basic agreement represents a new initiative that brings together the network visibility and control technologies cultivated by Allied Telesis and SecuAvail's expertise in log analysis and SOC operations, enabling a holistic approach that closely links network infrastructure and security operations.

By combining the respective strengths and expertise of both companies, we will work to develop more effective mechanisms that support organizations throughout the security lifecycle, from risk identification to incident response. Through these efforts, we remain committed to further strengthening our customers' cybersecurity capabilities.

【Mr. Tomoyuki Horino, Director and Executive Vice President, SecuAvail Inc.】

Enhancing an organization's ability to respond to security incidents requires more than simply detecting threats through log analysis. It is equally important to understand the specific conditions under which incidents occur within the network and to respond appropriately based on that insight.

Through this basic agreement, we believe that combining SecuAvail's expertise in log analysis and SOC operations with Allied Telesis' network technologies will enable a more comprehensive understanding of security events from multiple perspectives and contribute to more advanced response capabilities. By transforming this collaboration into tangible solutions for end users, we will address the unique security challenges faced by each organization and support their ongoing security operations.

■ Overview of Both Companies

【Allied Telesis, Inc.】

Founded in 1987, Allied Telesis is a Japan-originated networking equipment manufacturer with a global presence. The company is a group of IT infrastructure specialists engaged in research and development, manufacturing, and sales of not only networking products such as switches and wireless LAN solutions, but also IT services and security solutions. As demand for digital transformation (DX) continues to grow across all sectors, Allied Telesis helps address increasingly complex networking challenges through information technology, contributing to the realization of a safe and sustainable society.

【SecuAvail Inc.】

Established in 2001, SecuAvail is one of Japan's few IT security specialists dedicated exclusively to network security. Since its founding, the company has supported the operation of information systems for enterprises and organizations. By providing services that are both secure and practical, SecuAvail helps customers strengthen system security and ensure the continuity of their business operations.
