July solar power generation was 3,052,570kWh, 10% below the P50 forecast, due to a seasonal rain front that caused heavy rain and a below-average number of productive daylight hours across Japan.

[1] Forecast Power Generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that serves as the base forecast for each solar power plant's operating plan.
[2] CO2 reduction is calculated as 0.66kg CO2 per kWh.
