NASA explores future lunar exploration solutions with Kudan's Lidar SLAM solution

NASA, the National Aeronautics and Space Administration, has been developing different remote sensing tools and solutions for the future exploration of the lunar surface, including the Kinematic Navigation and Cartography Knapsack (KNaCK) for mapping, and use on the next generation of lunar rovers.

Kudan, a leader in advanced SLAM technology, is pleased to announce that NASA has worked with our advanced lidar SLAM software to extend the capabilities of KNaCK in exploration of high resolution 3D point cloud mapping, as well as, developing a rover solution for exploratory navigation and mapping of unknown terrain, culminating in demonstrations meeting or exceeding expectations.

With Kudan's support, the project demonstrated that SLAM and other related methods can function effectively in environments without GPS, such as on the Moon. Based on these results, NASA plans to further enhance its system to ensure the success and safety of future flight missions.

(Future Outlook)

We estimate this release will only have a minor impact on the current fiscal year's financial performance. We will promptly make an announcement if any event arises that is expected to have a significant impact on the company's financial performance.

About Kudan Inc.

Kudan is a deep tech research and development company specializing in algorithms for artificial perception (AP). As a complement to artificial intelligence (AI), AP functions allow machines to develop autonomy. Currently, Kudan is licensing its technology for next-generation solution areas such as digital twin, robotics and autonomous driving.

For more information, please refer to Kudan's website at <https://www.kudan.io/>.

■Company Details

Name: Kudan Inc.

Securities Code: 4425 (TSE Growth)

Representative: CEO Daiu Ko
