Pharma Foods' Antibody Technology Advances as Takeda Exercises Sequence Purchase Option

Pharma Foods International Co., Ltd. (hereinafter: PFI) announces that Takeda Pharmaceutical Co., Ltd. (hereinafter: Takeda) has exercised its contractual option to acquire the sequence information of a chicken-derived antibody (hereinafter: the Antibody), generated using PFI's proprietary antibody discovery platform, ALAgene® technology.

Pursuant to this transaction, PFI has transferred to Takeda both the Antibody's sequence data and the associated rights to seek patent protection, in exchange for a predetermined consideration.

The PFI Group, guided by its mission of "Contributing through Research in Pharmaceuticals and Foods," remains dedicated to advancing biomedical innovation through proprietary research and development. PFI will continue to harness its unique platform to generate high-affinity antibodies and contribute to global health and therapeutic advancement.

* ALAgene® technology

PFI's proprietary technology generates antibodies derived from chickens. By enabling the production of high-affinity antibodies against antigens that are often poorly immunogenic in mammalian systems, ALAgene® offers a powerful alternative for the development of next-generation antibody therapeutics.

ALAgene®
