LogStare and APRESIA Systems Partner to Enable Performance Monitoring of L2 Ethernet Switches

Inspired by the cheetah—the fastest animal on land—the logo embodies the speed of incident detection. Its leftward gaze signifies vigilance toward the past, ensuring immediate recognition of anomalies.

LogStare Inc., a wholly owned subsidiary of SecuAvail Inc. (Head Office: Kita-ku, Osaka; President and CEO: Masaomi Yoneima; TSE Growth: 3042), a leading Japan-based company specializing exclusively in cybersecurity, has announced a new product integration in collaboration with APRESIA Systems Ltd. (Head Office: Chuo-ku, Tokyo; President and CEO: Masahiko Suenaga), a pioneer in the development of Ethernet switches and optical transmission equipment.

Through this collaboration, LogStare's proprietary security operations software, *LogStare Collector*, now supports the ApresiaNP series, as well as the ApresiaLightGM200 and GM300 series devices.

This enhancement provides real-time visualization of key performance metrics and internal temperature data, enabling organizations to monitor overall network health and detect potential operational bottlenecks at an early stage.

Intuitive dashboard view of LogStare Collector, offering at-a-glance insights into network and server operational status.

LogStare Collector is a security operations software developed by LogStare Inc. as a fully domestic solution. It integrates multiple functions—including network monitoring, Syslog server,

and Windows log management—into a single package. Owing to its ease of use, the software has been widely adopted by system integrators and enterprises of all sizes, particularly for network monitoring purposes.

Key features include:

- **initial setup via Auto-Scan**
- **A comprehensive, auto-maintained monitoring database supporting extended MIBs**
- **A user-friendly interface that minimizes onboarding time**

Through a newly established partnership with APRESIA Systems Ltd., *LogStare Collector* now supports the ApresiaNP series, ApresiaLightGM200, and GM300 series devices. The ApresiaNP series is a high-performance Layer 2 switch engineered for mission-critical enterprise networks, while the GM200 and GM300 series offer cost-effective solutions optimized for smaller-scale deployments. Given the potential operational impact of device downtime, proactive monitoring of these switches is essential—and now readily achievable through this collaboration.

ApresiaNP series

By deploying *LogStare Collector*, organizations can easily begin monitoring the performance of ApresiaNP series, ApresiaLightGM200, and GM300 series devices. This enables early detection and resolution of network issues that are often difficult to identify—such as communication latency or hardware anomalies—helping to ensure stable and efficient operations across the entire infrastructure.

Detailed configuration procedures for monitoring these Apresia devices with *LogStare Collector* are publicly available on *KnowledgeStare*, LogStare's technical media platform dedicated to network and log monitoring. The content is freely accessible to all users.

Looking ahead, LogStare Inc. remains committed to collaborating with domestic security vendors, leveraging Japanese technologies to support resilient IT infrastructure and contribute to the advancement of national cybersecurity.

About LogStare Inc.

Founded in August 2020 with investment from SecuAvail Inc., LogStare Inc. develops and markets the *LogStare series,* a fully domestic managed security platform that delivers high-precision log management and monitoring powered by AI. The company's solutions are widely used across diverse IT environments, including Security Operation Center (SOC) providers, data center operators, public institutions, private enterprises, and individual users, with a cumulative user base exceeding 5,600.

About the *LogStare Series*

The next-generation managed security platform *LogStare* is a SaaS-based log analysis and security operations platform independently developed by LogStare Inc. under the supervision of its parent company, SecuAvail Inc., which has provided SOC services since its founding in 2001. Designed as a fully domestic solution, LogStare Inc. supports all types of IT products, from cloud to on-premises environments, by centrally managing logs and monitoring data generated within enterprises. It enables comprehensive system support through daily network monitoring, root-cause analysis in the event of incidents, and AI-driven predictive insights, thereby helping organizations operate their IT systems more securely and efficiently.

About SecuAvail Inc.

Founded in 2001, SecuAvail Inc. is one of the few Japan-based companies exclusively dedicated to network security, offering long-term operational support for corporate and organizational information systems. To ensure robust system security and uninterrupted business continuity, the company provides services that are both highly secure and practically applicable.

For over two decades, SecuAvail has offered *NetStare,* an integrated security operations service that uniquely combines the capabilities of both a Security Operation Center (SOC) and a Network Operation Center (NOC). Through *NetStare,* the company monitors more than 11,000 client network devices in real time, collecting approximately 2.5 billion log entries per day. This enables rapid detection of equipment failures, communication outages, and cyberattacks—24 hours a day, 365 days a year.
