JMDC Inc.

JMDC Initiates Ecosystem Development for Realizing Healthcare DX

- Business Alliance Formed with Software Service, Inc., an Electronic Medical Record Provider for Hospitals -

JMDC Inc. (Headquarters: Minato-ku, Tokyo; President and CEO: Ryo Noguchi; hereinafter "JMDC") has initiated the construction of an ecosystem aimed at realizing healthcare Digital Transformation (DX) through the utilization of clinical data derived from hospitals. As an important partnership for this purpose, we would like to announce the business alliance with Software Service, Inc. (Headquarters: Osaka-shi, Osaka; President: Akihiro Otani; hereinafter "Software Service").

■ Background and Purpose of the Alliance

JMDC's corporate philosophy is "A healthy and enriched life for all". In alignment with this philosophy and to contribute to the nation's push for healthcare DX, JMDC aims to realize a sustainable healthcare system by addressing issues such as rising medical costs and regional disparities in healthcare using the power of data and ICT.

Specifically, JMDC has supported the optimization of healthcare by accumulating a wide range of healthcare data and returning it to society. Under this principle, JMDC has been providing services to medical institutions since 2018. Currently, JMDC provides various services to over 3,000 medical institutions domestically and has received permission for data utilization from over 1,300 medical institutions.

On the other hand, with increasing needs for healthcare DX and management improvement, building an ecosystem that involves the entire industry is essential to maximize the value of medical big data. To achieve this, collaboration between players with strong customer bases and JMDC, which has expertise in data utilization within academia and industry, is the key to accelerating its realization. Therefore, we have decided on this business alliance with Software Service as a crucial step toward building this ecosystem.

Software Service's management philosophy is to "Contribute to society by creating systems that empower people. Support future healthcare, medical services, and nursing care through information systems". For over half a century, the company has specialized exclusively in the medical IT field, providing over 100 diverse services, including electronic medical records and various departmental systems, to 1,000 medical facilities nationwide. Furthermore, Software Service offers an extensive system lineup beyond electronic medical record systems. It provides an "all-in-one" total solution to a wide range of medical institutions across the country, covering everything from development, sales, and implementation to 24/7/365 maintenance support, all under its own integrated system. This commitment has long contributed to establishing IT foundations for medical institutions that support regional healthcare, promoting healthcare DX in alignment with on-site operations.

Through this alliance, JMDC and Software Service will mutually and effectively utilize their respective assets: JMDC's proprietary anonymization technology and data utilization expertise, and Software Service's strong customer base in medical institutions and practical implementation capabilities. This will strongly promote the use of data necessary for DX and management

improvement at Software Service's client medical institutions, thereby accelerating the healthcare DX in Japan that the nation aims for.

■ Details of the Alliance

1. Support for the utilization of medical big data for Software Service's client medical institutions
2. Advancement of Software Service's data utilization services using JMDC's anonymization technology and data analysis expertise
3. Joint business development related to the utilization of medical data (DPC, medical claims data, etc.)

■ Future Developments

This alliance is part of JMDC's open alliance approach to ecosystem building. JMDC continues to engage in dialogue with various companies regarding the utilization of medical data derived from hospitals. We ask for your continued anticipation regarding the further expansion of this alliance.

Going forward, both companies will deepen their collaboration by leveraging their respective strengths, working together to realize JMDC's vision of "realizing a sustainable healthcare system by addressing social issues with the power of data and ICT" and contributing to Software Service's mission of "supporting future healthcare, medical services, and nursing care through information systems".

◆ About Software Service, Inc.

Since its founding over half a century ago, Software Service has been a comprehensive medical information system manufacturer, developing a wide variety of products and services to totally support the resolution of issues faced by medical institutions. Their flagship electronic medical record system boasts over 1,000 installations across national, public, and private hospitals nationwide, covering a wide range of bed sizes, from small to large. Through product strength that deeply captures on-site needs and a consistent, end-to-end support system, the company powerfully supports the improvement of operational efficiency and quality of care in the medical field.
