Announcement: Launch of the Gig Worker Platform "SPOTJOBS"

INFORICH INC. (Headquarters: Shibuya-ku, Tokyo; President & Group CEO: Hironobu Akiyama; hereinafter "INFORICH"), which operates the mobile battery sharing service "ChargeSPOT®", will launch the gig worker platform "SPOTJOBS™" on Tuesday, July 1, 2025.

In operating a mobile battery sharing service, resolving the uneven distribution of batteries is essential. Up until now, we have outsourced the redistribution tasks to multiple companies, and in areas where outsourcing was not possible, we have sought cooperation from our partner stores to help in resolving imbalances and returning batteries. With the launch of "SPOTJOBS," we aim to provide an even more meticulous solution to battery distribution, thereby further enhancing the convenience of our services.

■ Background of Service Launch

"ChargeSPOT," the mobile battery sharing service, is characterized by allowing users to return the rented battery at a different location from where it was rented. Due to differences in location, some battery stands experience a higher rate of rentals, while others see more returns, resulting in the uneven distribution of mobile batteries. Addressing this imbalance is essential to enhance service convenience, enabling users to borrow and return batteries whenever needed.

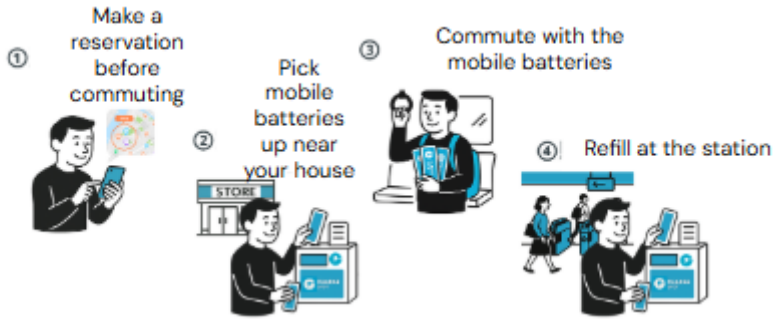

At INFORICH, we have previously outsourced the battery redistribution tasks to multiple operators. In areas where outsourcing proved difficult, we send batteries by mail to stores where battery stands are installed, and request operational support from store staff.

With the launch of "SPOTJOBS," we aim to create opportunities for more people to be involved in redistribution operations. By conducting these tasks under our direct management, we also seek to achieve more precise and efficient redistribution. Internalizing the redistribution operations, which are crucial to maintaining the convenience of "ChargeSPOT," is an important initiative for the continuity of our business. We will continue to work on improving the operation of "ChargeSPOT" to provide a stable charging environment in all regions.

■ Service Details

This service enables workers to transport batteries from overstocked locations to those likely facing shortages, at their preferred time.

Individuals who register as workers on "SPOTJOBS" are called "Job Crews." The service matches Job Crews with support tasks to resolve battery distribution imbalances for "ChargeSPOT."
