Notice Regarding the Successful Launch of Synspective's 14th Small SAR Satellite in the StriX Series

Synspective Inc. (the "Company") hereby announces that its 14th small SAR satellite has been successfully placed into orbit launched by an Electron rocket of Rocket Lab USA, Inc. (Headquarters: California, U.S.A.; CEO: Sir Peter Beck), and has successfully deployed its antenna.

The 14th satellite was launched into orbit by Rocket Lab's Electron rocket from Launch Complex 1 on New Zealand's Mahia Peninsula on November 27, 2026, 9:15 (Japan Standard Time). The antenna was successfully deployed, communications for testing functioned properly, and the satellite was confirmed to be controllable. Over the coming months, Synspective will conduct testing and commissioning to verify the satellite's observation capabilities before entering service.
Although the target number of satellite launches for the current fiscal year was set at six satellites, smooth progress in satellite manufacturing and launch preparations has made this 14th satellite the seventh launch for the fiscal year.

This matter has not been factored into the full-year consolidated earnings forecast for the fiscal year ending December 31, 2026, announced on February 13, 2026. Its impact on the Company's results for the current fiscal year is expected to be immaterial.
The Company will promptly inform you of any matters requiring disclosure that may arise in the future.
