Notice Regarding Business Alliance with REXEV Co., Ltd. (Alliance to Build an Energy Platform)

Remixpoint, inc. (the "Company") hereby announces that its Board of Directors, at a meeting held today, resolved to enter into a business alliance (hereinafter the "Business Alliance") with REXEV Co., Ltd. (Head office: Chiyoda-ku, Tokyo; President and Chief Executive Officer: Ken Watanabe; hereinafter "REXEV"), with a view toward a potential capital alliance in the future. The details are as follows.

1. Reason for the business alliance

The Company Group is developing a comprehensive energy business, which includes the electric power retail business, the grid-scale battery storage business, procurement of FIP power sources, and the sale of customer battery storage. Currently, the Company is expanding its business by holding numerous distributed energy resources as assets within its network, including a sales pipeline of approximately 1,000 low-voltage grid-scale battery storage systems currently under application. However, a business model relying on hardware sales and the expansion of self-owned assets faces structural challenges, such as scale competition with other companies and the risk of price declines due to changes in market rules. To achieve sustainable growth, it is essential to evolve into an "energy platformer" that generates continuous revenue through post-installation remote control and market operations, in addition to equipment sales and asset holding.

REXEV is an Energy Tech company that develops, provides, and aggregates energy management systems targeting distributed energy resources such as EVs and stationary battery storage. The company possesses advanced control technology capable of consistently handling everything from the provision of IoT equipment to cloud system construction and actual operations in the electricity market, along with expert personnel well-versed in electricity trading.

The primary objective of the Business Alliance is to establish robust aggregation capabilities by integrating the assets, such as the customer base and battery storage held by the Company, with the advanced control technology and market operational know-how held by REXEV. By utilizing REXEV's market optimization algorithms, the Company will optimally operate the battery storage it sells and owns across multiple electricity markets, thereby building a recurring revenue business model that generates continuous operational revenue (aggregation revenue) in addition to equipment sales.

Furthermore, through the Business Alliance, the Company will accelerate the building of an energy platform that integrates sales, holding, and operations, aiming to improve the profitability of the entire energy business and enhance corporate value. Through this Business Alliance, the Company will advance the construction of a business

foundation that connects its battery storage and customer base not only to temporary revenue opportunities at the time of sale but also to continuous revenue opportunities through post-installation operations and market trading. Moreover, based on the outcomes of the business alliance, the companies will proceed with discussions regarding the possibility of a future capital alliance and joint business.

2. Details of the business alliance

The specific details of the Business Alliance are as follows:

(1) Joint rollout of battery storage aggregation operations

Targeting approximately 1,000 low-voltage grid-scale battery storage systems that the Company plans to sell, as well as customer battery storage and FIP power sources, the Company will jointly promote aggregation operations with REXEV. This will build a robust recurring revenue base that generates continuous operational revenue even after installation.

(2) Strengthening the earnings base through mutual customer referrals

By mutually utilizing the customer bases held by both companies, they will strive to originate new projects and expand installed equipment. By expanding both sales opportunities and target equipment for operation, they will promote the strengthening of the medium- to long-term earnings base.

(3) Building an energy platform

The companies will deploy REXEV's energy management technology, market operational know-how, and aggregation capabilities to the Company's customer base, promoting the construction of an energy platform that integrates sales, holding, and operations. In the future, with an eye toward the integrated management of distributed energy resources and the utilization of environmental value, they aim to build a business foundation that continuously creates added value.

3. Overview of the alliance partner (As of July 31, 2026)

(1) Name	REXEV Co., Ltd.
(2) Location	1-9-5 Kanda Awajicho, Chiyoda-ku, Tokyo
(3) Title and name of representative	Ken Watanabe, President and Chief Executive Officer
(4) Description of business	- Provision of EV introduction support and EV operation systems for companies and municipalities - Development and provision of energy management systems using EVs and battery storage - Development and provision of EV fleet management systems - Development and provision of EV car-sharing systems
(5) Share capital	100 million yen
(6) Date of establishment	January 23, 2019
(7) Number of issued shares	1,302,300 shares
(8) Fiscal year-end	December 31
(9) Major shareholder and shareholding ratio	Undisclosed, as there is a high possibility that this would constitute a breach of confidentiality obligations in the relationship between the said company and its shareholders.

(10) Relationship between the listed company and the said company	Capital relationship	None
	Personnel relationship	None
	Business relationship	None
	Status as a related party	None
(11) Operating results and financial position of the said company for the last three years	- Net assets: 217 million yen (As of Dec. 31, 2025) - Total assets: 315 million yen (As of Dec. 31, 2025) As the said company is an unlisted company and these details include confidential business information, other items are undisclosed at the request of the said company.	

4. Schedule

(1) Date of Board of Directors' resolution	August 17, 2026
(2) Execution date of the business alliance agreement	August 17, 2026
(3) Commencement date of the Business Alliance	August 17, 2026

5. Future outlook

Through the Business Alliance, the Company Group will accelerate the building of an energy platform that integrates the sale, holding, and operation of battery storage. By leveraging REXEV's advanced aggregation technology and market operational know-how, the Company will promote the expansion into a recurring revenue model that generates continuous operational revenue even after battery storage installation.

Going forward, in addition to a revenue model centered on hardware sales, by combining EMS, aggregation, and market operations, the Company will advance its expansion into an energy platform business that creates continuous added value from its distributed energy resources, aiming to strengthen its medium- to long-term earnings base and enhance corporate value.

Although the impact of the Business Alliance on the Company's consolidated financial results for the fiscal year ending March 31, 2027, is expected to be minor, the Company believes that over the medium to long term, expanding the equipment targeted for operation, originating new projects, and accumulating aggregation revenue through the Business Alliance will contribute to strengthening the Company Group's earnings base.

If any matters arise that require disclosure in the future, the Company will promptly announce them.
