Announcement of Conclusion of a Joint Research Agreement with Shinshu University

YAMASHIN-FILTER CORP. (Representative Director and President Atsuhiko Yamazaki; hereinafter referred to as the “Company”) is pleased to announce that it has entered into a joint research agreement with Shinshu University, a national university corporation located in Matsumoto City, Nagano Prefecture (President: Soichiro Nakamura). The research under this agreement commenced in April 2026 as part of an industry-academia collaboration.

1. Purpose of the Joint Research Agreement

In our Equity Story “YAMASHIN FILTER VISION 2030,” announced in December 2025, we outlined our strategy to establish new businesses by focusing on three key market areas: functional textiles, life sciences, and industrial materials. We are actively working on the development and social implementation of materials centered on nanofibers. This joint research aims to combine our proprietary nanofiber development and mass production technologies with Shinshu University’s robust research capabilities, which are renowned domestically in fiber science, nanofiber, high-performance fibers, and materials engineering. The goal is to advance seamlessly from basic research through to mass production and practical application, thereby establishing technologies for the social implementation of functional materials.

2. Overview of Joint Research

The research will focus on foundational studies for product development utilizing nanofibers across various fields, including apparel materials, insulation, heat-resistant materials, vital sensors, piezoelectric sensors, and EMI shielding, with the aim of practical application.

Further details will be announced at a joint press conference scheduled for May 26, 2026.

3. Future Outlook

The impact of this agreement on the Company’s consolidated financial performance is expected to be minor. If there are any revisions to performance forecasts or other material disclosures required in the future, we will promptly announce them.
