Torishima Commemorates the New Delta Project Launch Ceremony in Egypt

- 49 large-scale pumps irrigate 920,000 hectares of desert land, with the Egyptian President presiding -

On 17 May 2026, Torishima Pump Mfg. Co., Ltd. marked a landmark moment in its global history as Egypt officially opened a major pumping station at the heart of the country's largest-ever agricultural development initiative — the "New Delta Project" project. The opening ceremony was presided over by President Abdel Fattah el-Sisi, attended by the Prime Minister and numerous senior government officials of the Arab Republic of Egypt, and broadcast to the nation via local television and official government media.

Torishima was represented at the ceremony by COO Alister Flett and Middle East General Manager Ashraf Saleh, joined by the Ambassador Extraordinary and Plenipotentiary of Japan to Egypt. Their presence at a head-of-state ceremony underscores the significance of Torishima's role in this transformative national programme.

■ Engineering at a Historic Scale

At the core of this achievement is Torishima's supply of 49 large vertical mixed flow pumps — now actively irrigating approximately 2.2 million feddans (around 920,000 hectares) of reclaimed agricultural land. To appreciate the scale: 920,000 hectares is an area comparable to the entire island of Cyprus, transformed from barren desert into productive farmland.

The ambition does not stop there. The Egyptian government has announced plans to expand the reclaimed area to 8 million feddans (approximately 3.36 million hectares) — a fourfold increase that places Torishima at the centre of one of the most consequential infrastructure programmes on the African continent. This expansion represents not only a long-term engineering partnership but a direct contribution to Egypt's food security and the livelihoods of millions of its citizens.

> **“Being present at this ceremony, alongside President el-Sisi and the Japanese Ambassador, was a profound reminder of what engineering can achieve,”** said Alister Flett, COO of Torishima. **“These pumps are not just infrastructure — they are the foundation of food security and livelihoods for millions of Egyptians. We are proud that Torishima’s technology is playing a central role in this national transformation.”**

■ National Media Coverage

The ceremony and the pumping station received extensive coverage across Egyptian local television and news outlets. The official video released by the Egyptian government prominently features Torishima’s large pumps at the station, providing a powerful visual testament to their role in converting desert into fertile agricultural land and supporting broader regional development.

■ Long-Term Commitment: New Service Centre in Egypt

In parallel with the project opening, Torishima is proud to announce the formal establishment of **Torishima Service Solutions Egypt Ltd**., with a dedicated Service Centre located in Ain Sokhna, Egypt. This facility is fully equipped to support and maintain the pumping infrastructure throughout the operational lifetime of the New Delta project.

The establishment of a local service entity reflects Torishima’s philosophy of being a long-term partner — not merely a supplier. By investing in in-country capability, Torishima ensures the integrity and performance of the project is sustained for decades to come, while also contributing to local employment and the development of technical expertise within Egypt.

■ A Commitment to Global Sustainability

Torishima remains committed to contributing to global sustainability, the development of local communities, and the enrichment of people’s lives through cutting-edge pumping technology and trusted engineering expertise. The New Delta project stands as a defining example of how world-class engineering, deployed with long-term partnership in mind, can help address some of humanity’s most pressing challenges — food security, water management, and sustainable land development.
