Notice Regarding the Launch of the New MicroGazer MB series and Exhibition at SEMICON Japan 2026

The Company will begin sales of the MicroGazer MB series, a non-contact 3D metrology system for semiconductor applications, on December 9, 2026. The Company will also exhibit the series at SEMICON Japan 2026, which opens on the same day, with an actual unit on display.

1. Overview of the MicroGazer MB series

As part of the new business initiatives under its Medium-Term Management Plan, the Company is developing measurement equipment for engineers and developers in the semiconductor line-side market.

MicroGazer is a new metrology brand launched by the Company as part of these initiatives, primarily for R&D, quality assurance, and design engineers in the semiconductor field. The brand combines a compact footprint with an intuitive user interface (UI) and aims to deliver a fast, straightforward measurement experience that pleasantly surprises its users.

The MB series is the first product series to be launched under the MicroGazer brand, with multiple models planned. The series provides non-contact 3D measurement at 10 nm resolution for applications such as wire-bond geometry, probe-mark depth and position, wafer half-cut depth, and underfill fillet height. Its compact 400 × 400 mm benchtop footprint allows installation near the production line (line-side), enabling rapid, on-the-spot measurement. Going forward, the Company will successively introduce product series for a wide range of applications to expand the MicroGazer lineup.

2. Exhibition at SEMICON Japan 2026

At the Company's booth, visitors can see the MB series in operation through live demonstrations and try the on-screen controls for themselves.

Exhibition Details

Event	SEMICON Japan 2026
Dates	December 9 – 11, 2026 (Wednesday–Friday)
Venue	Tokyo Big Sight, West Hall Atrium
Booth No.	A1208
Product	MicroGazer MB series
